DATA & ANALYTICS BROCHURE

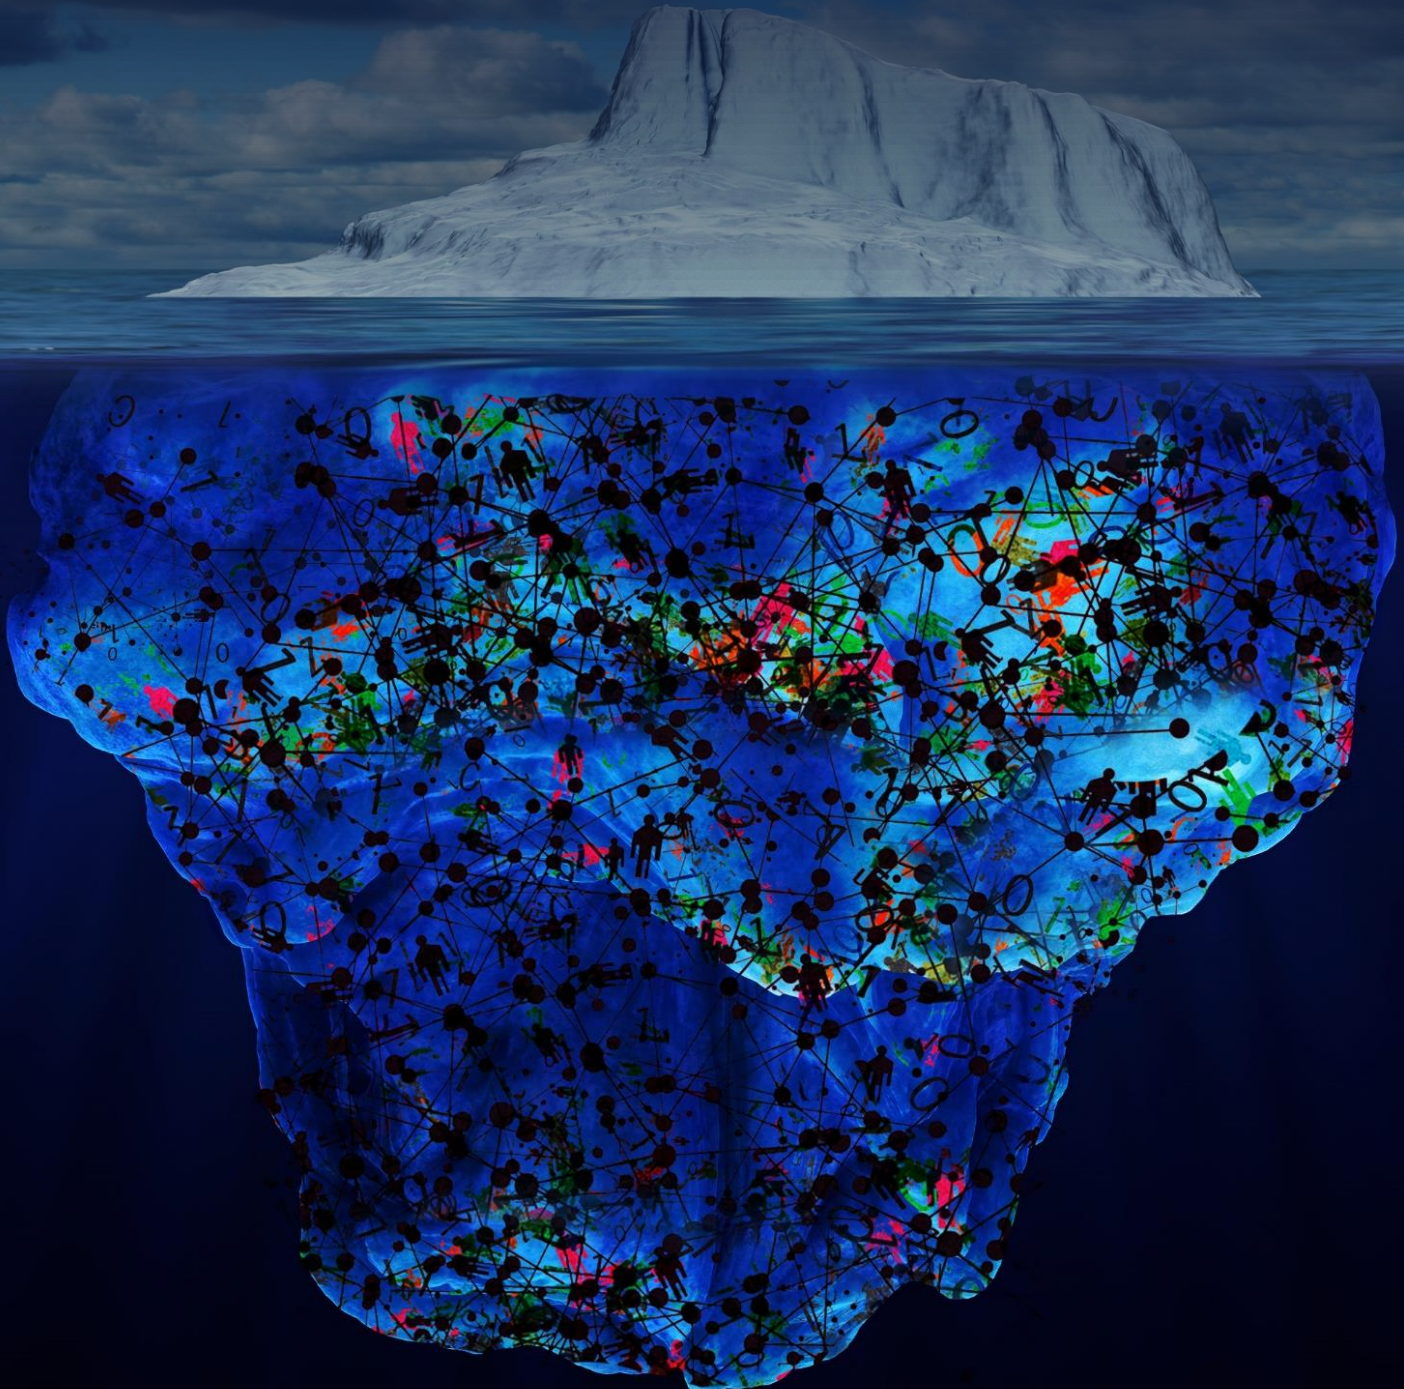

Collaborating with Tomorrow's Intelligence

With our extended Artificial Intelligence lab, experiment new technology that is right for you without making costly investments. With the right resources, technology, expertise, and global Data Science team, we can help you to gain a more significant market share of your industry with better intelligence.

Create a Blue Ocean Strategy with Big Data

We harness Big Data's unprecedented capabilities across integrated structured and unstructured data sources to deliver actionable insights and predictive analytics that organizations can use to identify opportunities, manage risks, learn from past mistakes and gain momentum with certainty

Sky Diving May be Easier than Cloud Data Integration

With a Disciplined approach, we ensure to provide you actionable data by employing the best of the breed cloud data integration, data quality, data governance, master data management, and data archiving tools and technologies.

Measure Your Business KPIs with Precision Analytics

We carefully devise and plan every interaction with data and every touchpoint by role with optimized effectiveness of information flow. We deliver visually stunning agile dashboards and reports with the exact information that you need and when you need on any device.

Accelerate Business Outcomes with a Modern Cloud Data Warehouse

With our Data Warehouse Modernization solutions and services, we offer tools and processes to upgrade legacy analytics platforms to the modern analytics ecosystem tailored to customer's current technology landscape, preferences, and objectives.

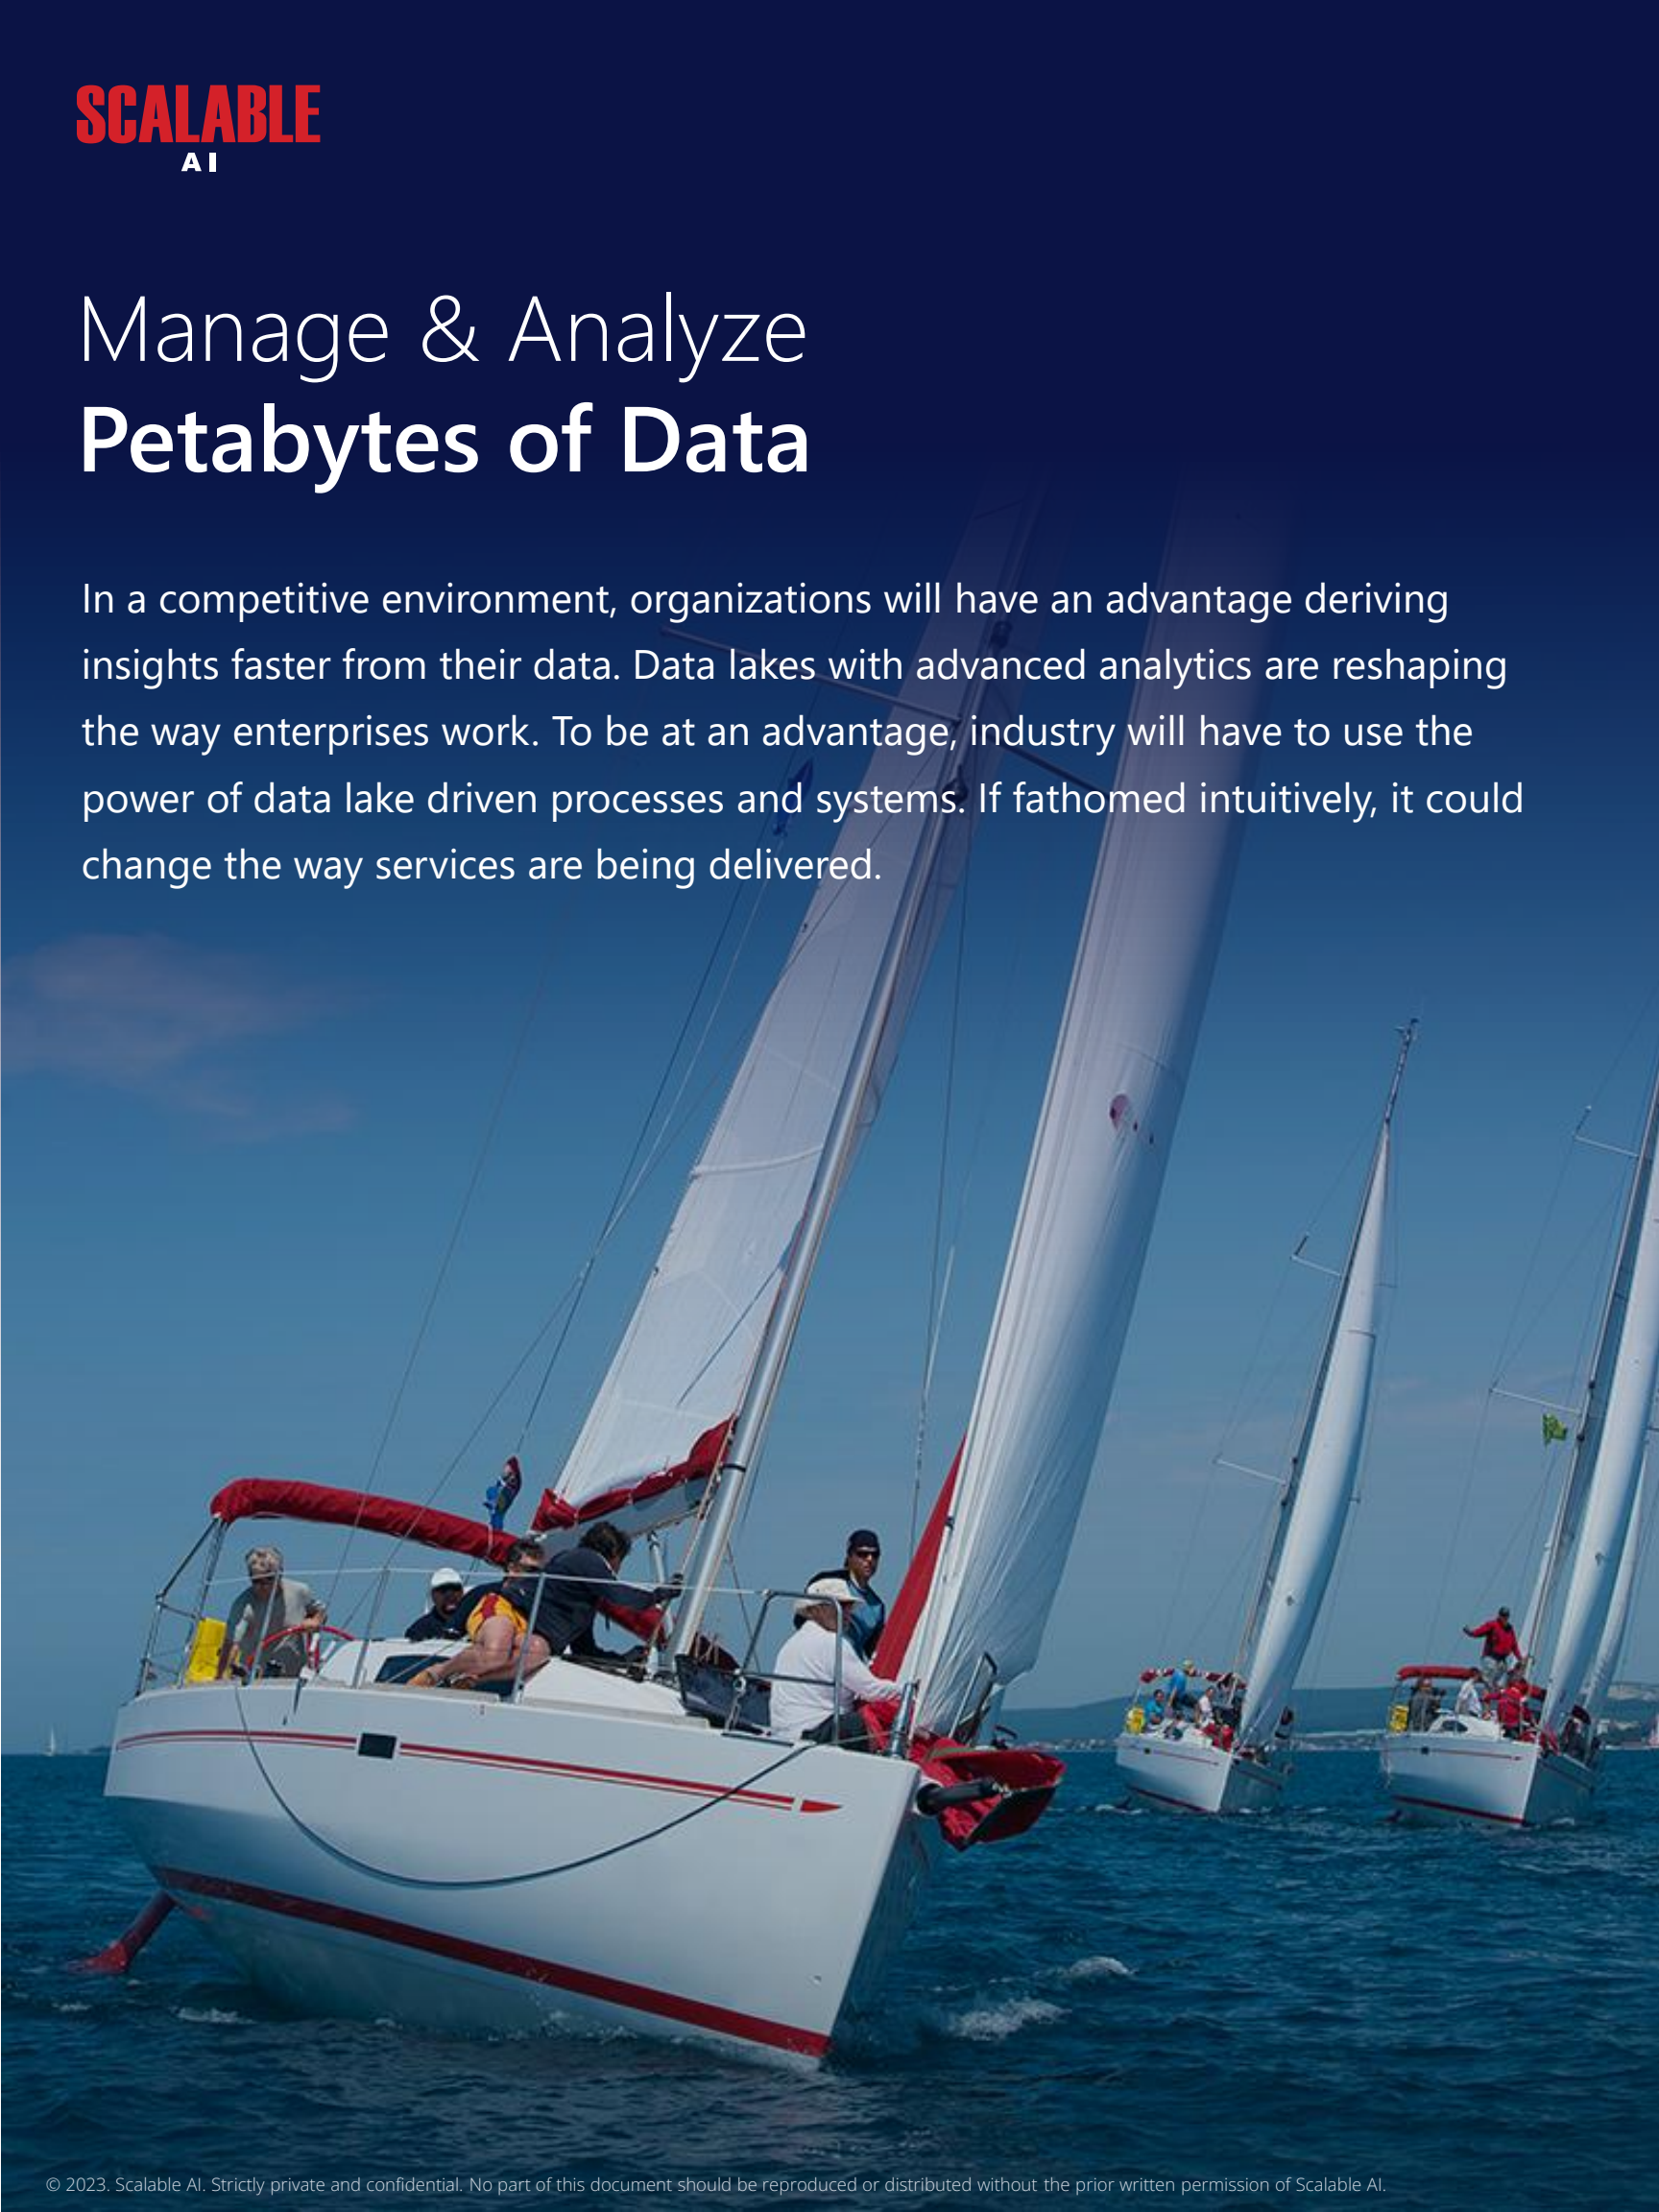

All Good Decisions Start with Trusted Data

Faster intelligence needs effortless scalability and speed to explore data. AI and machine learning algorithms need complete and correct data. Our Data Wrangling services can help accelerate Data cleaning and preparation needed to build a modern data warehouse.

Manage & Analyze Petabytes of Data

In a competitive environment, organizations will have an advantage deriving insights faster from their data. Data lakes with advanced analytics are reshaping the way enterprises work. To be at an advantage, industry will have to use the power of data lake driven processes and systems. If fathomed intuitively, it could change the way services are being delivered.

All Intelligence Starts with a Proper Foundation

When focusing on data driven Digital transformation, a critical asset is data, but only if it is well governed. In a hybrid cloud environment managing, mining and keeping inventory within diverse and distributed data assets is a huge challenge. Our Data Governance and Data Catalog solutions can help to manage organizational metadata.

Are Data Scientists a Rare Commodity? Maybe not

With a focused approach, we source, train, and build our data science talent pool globally. Whether you want to augment your existing data and analytics team, or you want to outsource your data analytics projects, we can help you faster, better, and cheaper than any analytics vendor in the market.
